

HYPER-CASUAL 3D PUZZLE · UNITY 6 · PORTRAIT MOBILE AND WEB

Unstitched

Unravel crocheted toys, stitch by stitch.

Tap the toy where a loose end shows

A round winds onto its spool

No spool open: it waits in the tray

The eye shows one layer down

13 toys, all open

The pitch

A yarn-unravelling puzzle in the style of Yarn Fever! Unravel Puzzle, with toys that come apart the way real crochet does. Pull a part and its next **round** winds onto an open spool of its colour, or waits in a small **tray**. Sewn-on parts must go first, and from level 5 **layers** hide what is underneath.

Design pillars

- **It comes apart like crochet:** stitch by stitch, round by round.
- **Every rule shows on the toy:** sewing, loose ends, layers.
- **Hidden, but fair:** the eye shows one layer down.
- **Difficulty is measured,** not guessed.

Systems

- Toys of 3 to 8 parts, 12 to 40 rounds, up to 7 colours.
- Two open spools of 4 from a queue; a tray of 0 to 3 places.
- Sewn-on parts, layers, an eye to peek one layer down.
- Tap, hold, or drag to turn; a hint from the solver.

13
toys, each adding one idea

100%→10%
a random player's wins, first toy to hardest

0/13
levels where a first pull loses

84%
of sampled bear orders can't be lost

3D models: every stitch is built in code

My role

Concept, rules, the 13 toys and their order, difficulty curve, UX and art direction. Built in Unity (C#) with an AI coding assistant (Claude): I set the rules, chose each spool order and tray from the tuner's measurements, played every build and decided each change.

What the measurements changed

Most orders are too safe, so each toy's queue is chosen on purpose. **Peeking needed limits:** the eye shows one layer down. **Gift and doll were re-sewn** because they could hardly be lost whatever the order.

In this portfolio

- Game Design Document
- System flowcharts
- Level design workbook, from the tuner
- Ad storyboard, CPI test and KPI plan
- Playable web build
