Draft, build, defend, draft again

One level from the island map to the next place. The player sets the pace: nothing moves until Start.

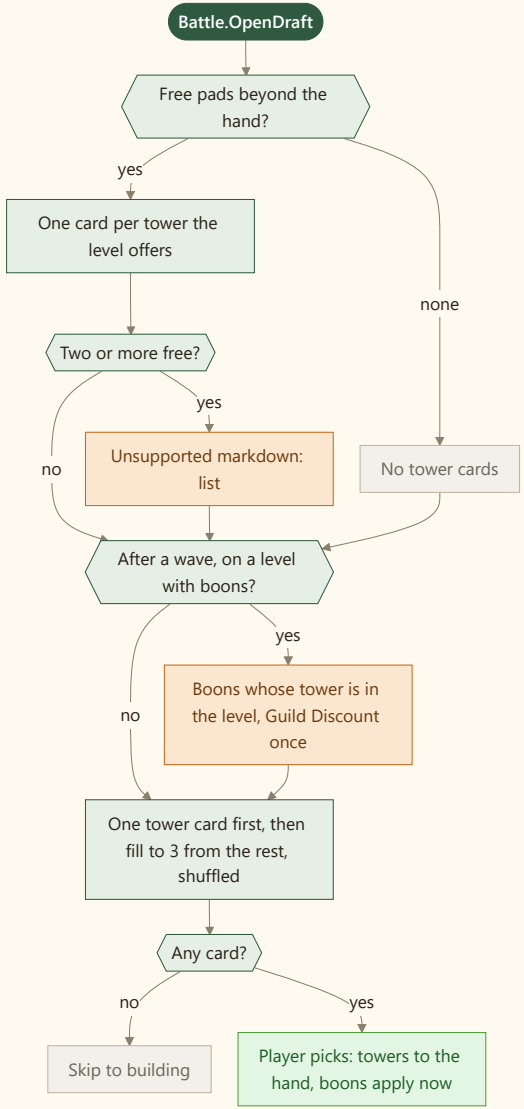

Screen flow

Hud.cs: one scene; panels over the 3D world.

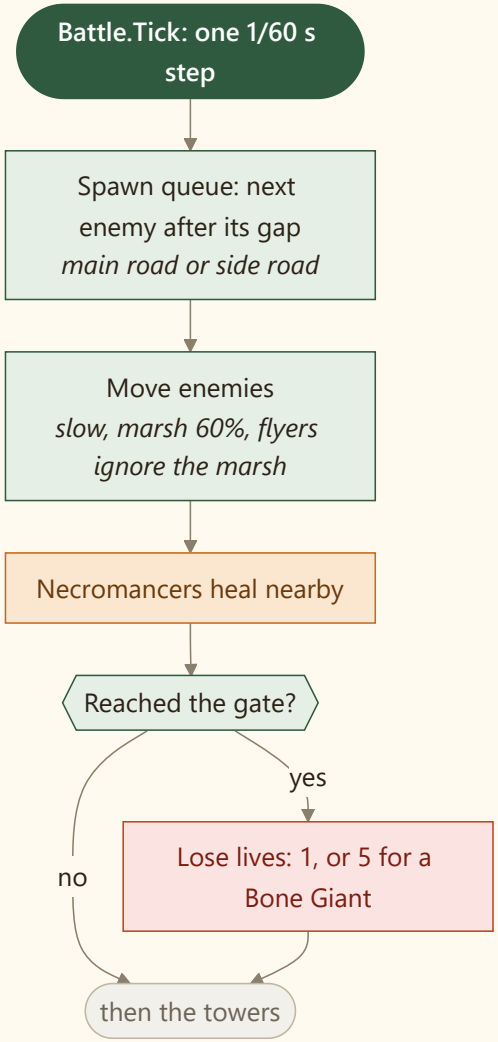

How three cards are dealt

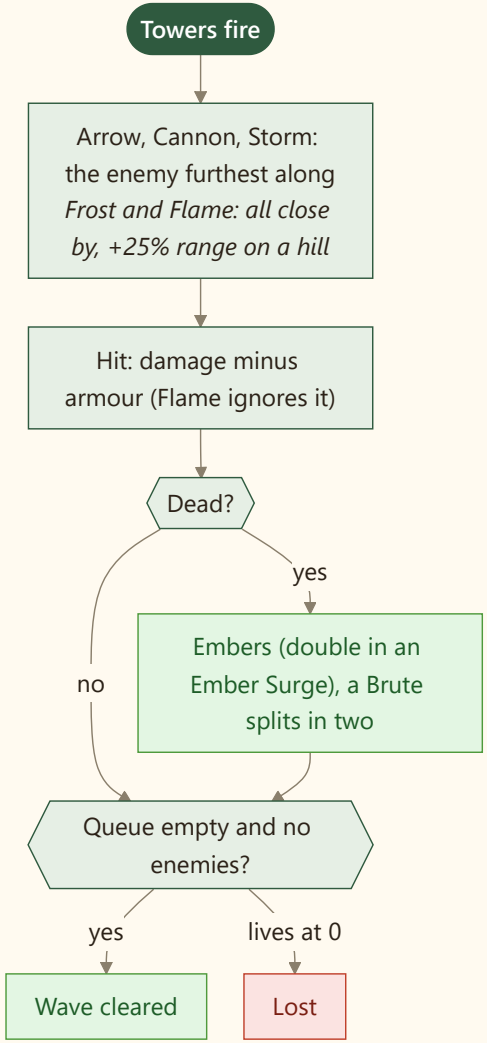

Battle.OpenDraft: two picks before wave 1 (towers only), one after each wave.

One step of the simulation

Battle.Tick at a fixed 60 steps a second, so the bots and the game agree to the frame.

One set of rules, four users

The rules live once, in Bonemarch.Core; the game, the tests, the bots and these documents all read from them.
