

HYBRID-CASUAL TOWER DEFENSE · UNITY 6 · PORTRAIT MOBILE AND WEB

Bonemarch

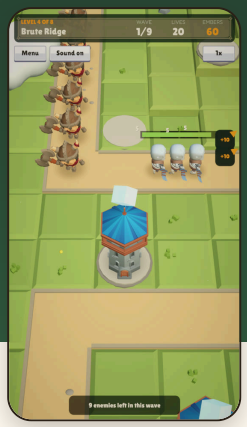

Draft your towers. Hold the gate.

The horde heads for the gate

Draft: pick two of three

Towers at work

A Bone Giant on level 7

8 places on one island

The pitch

A calm 3D tower defense where the towers come from a **card draft**: two picks before the first wave, one after every wave. Each level is a new place on an island, with one **landmark** that changes where towers belong (a bridge, a hill, a fen, a fork, ruins) and one new skeleton that asks a new question.

Design pillars

- **Calm, not slow:** no timer between waves; 2× is optional.
- **The draft is the strategy:** every run is a different hand.
- **Every level is a place:** its landmark moves the towers.
- **Readable at a glance:** enemies by silhouette, towers by roof colour.

Systems

- 5 towers, 7 enemies, 10 boon cards.
- Embers buy upgrades and clear ruins; crystals to find.
- An Ember Surge softens each new enemy's first wave.
- Stars from lives left; an island level map.

8
hand-made levels, one landmark each

9×13 → 17×22
map size, level 1 to 8

100% → 60%
first-time bot's win rate, level 1 to 8

2.5–13.5
minutes of fighting a level

EditMode tests on the rules

My role

Concept, rules, the draft, the economy and the difficulty curve, the landmarks and the brief for every level, UX and art direction on free CC0 kits. Built in Unity (C#) with an AI coding assistant (Claude): I set the rules and the targets, reviewed every build and decided each change. The eight levels in this build are AI-assisted drafts I am redesigning.

The bots drove it

The prototype could not be lost: every bot, even a random one, won almost every level. Bots playing the game's own rules 300 times a cell set each level's health and found that **boons** barely matter, because a boon replaces a tower card. **Hand-made levels** cut the last levels from 24 and 37 minutes to under 14.
