1 · THE LOOP

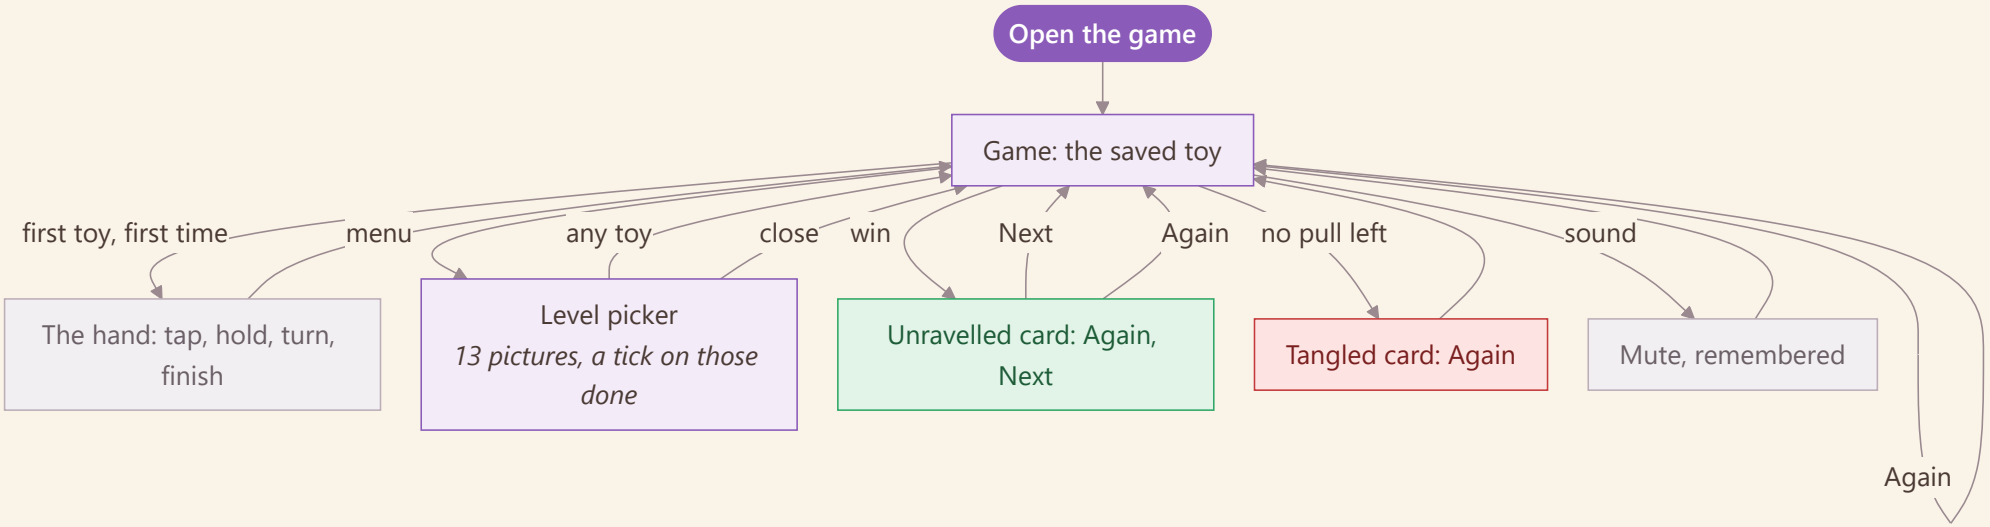

# Look, pull, fill, unravel

No timer: the only pressure is the tray. A toy can tangle, and Again is free.

# Screen flow

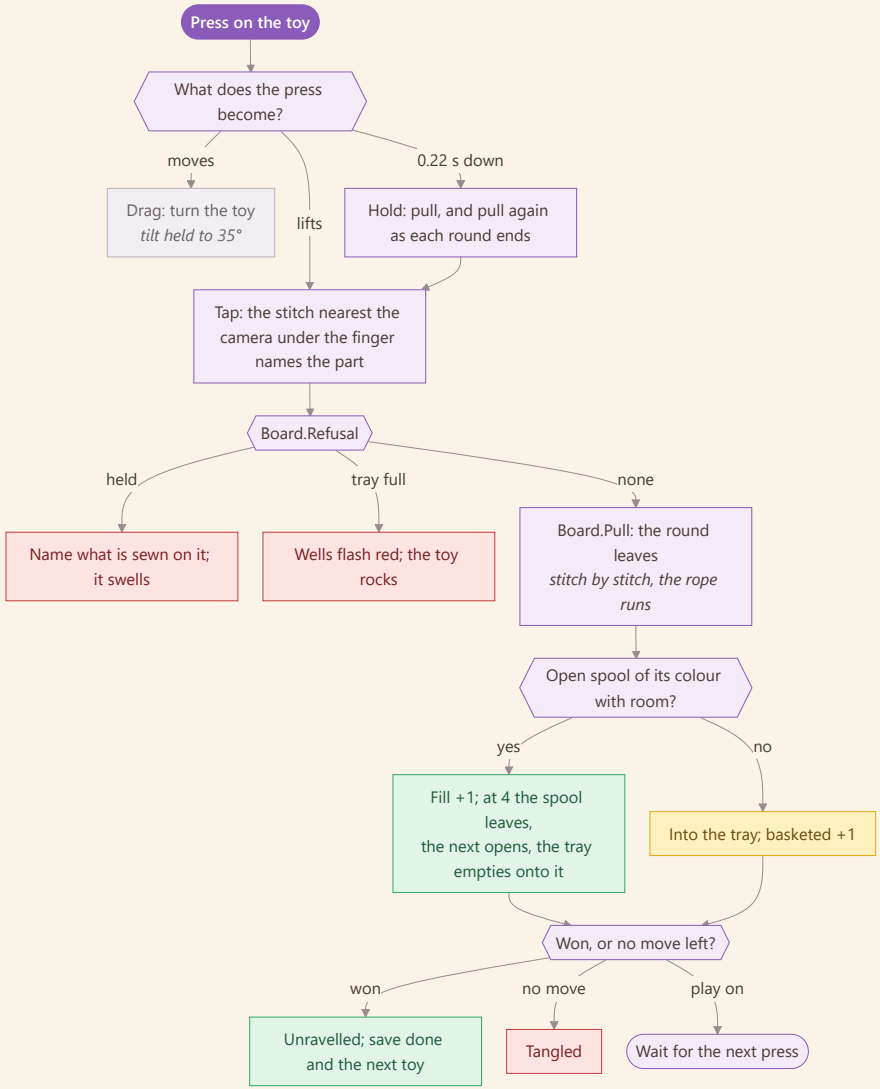

One screen, two cards and the level picker; the game opens straight on the saved toy.

3 · A PULL

# From the finger to the spool

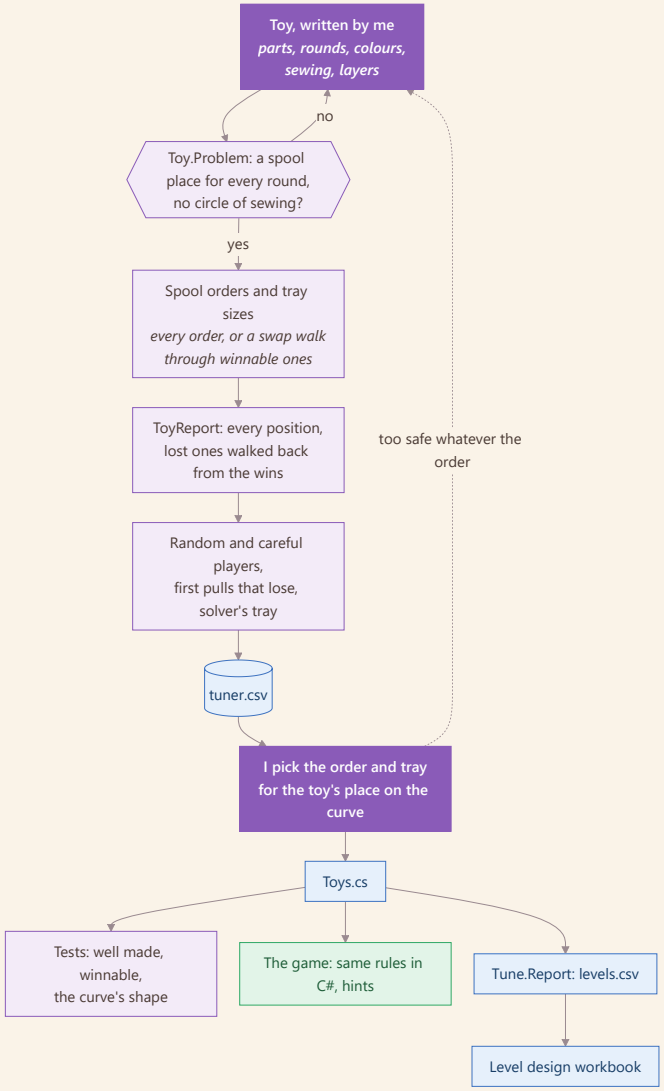

GameMain and Board.Pull: the rules move at once; the spools and the tray change when the yarn arrives.

4 · LEVELS

# How a toy's difficulty is chosen

I write the toy; the tuner measures its orders and trays; I choose, and the tests hold the curve.

5 · CODE

# Architecture

Rules in pure C# with tests; MonoBehaviours only draw, take input and animate; the toys are built in code.
